## Industrial & Sewer Cleaning Kits

1/8" to 1" NPT      1.7 to 80 GPM  
1" to 24" Lines      1200 to 10,000 PSI

### 3 EASY STEPS TO SEWER AND DRAIN CLEANING

1. Thrust thru the clog with the 25 degree angle penetrating nozzle.
2. Flush loose debris with the 45 degree angle flushing nozzle.
3. Run the 0 and 45 degree angles polisher thru the line for maximum line recovery.

**Penetrator:** Use to penetrate any clog in the line you are servicing, freeing it of blockage and restoring drainage.

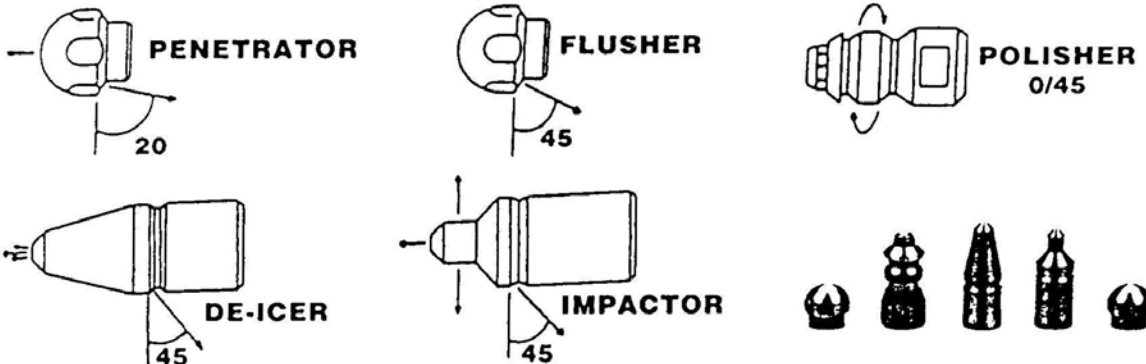

**Flusher:** Use to remove any excess debris left in the line, opening it back up to near full capacity.

**Polisher:** Use this specially designed nozzle to "polish" the diameter of the line being serviced. This will bring the line back to its maximum capacity. The smooth finish left on the inside of the drain will help prevent the line from clogging for a longer period of time.

### SPECIAL APPLICATIONS NOZZLES

**De-greaser/icer:** This nozzle is useful in lines that are heavily clogged or completely blocked by grease, hard soap, or even ice.

**Impactor:** The tipped end on this nozzle will help in removing sand, grit, and light scale from the line.

*Penetrator - Flusher - Polisher*

*Penetrator - Flusher - Polisher - De-Icer*
